COMMONLY FOUND ASBESTOS IN RESIDENTIAL BUILDINGS

Products containing asbestos are very difficult to identify with the naked eye as the asbestos fibres are microscopic. Asbestos was often mixed with other materials in the building process and is hidden within many commonly used building products. For this reason, any demolition or old building materials **must not** be placed in your waste bin unless you can provide an asbestos clearance report showing the material has been tested and contains no asbestos. Please take care with items like vinyl flooring, fencing materials and house soffits.
